■ De-rating Curve:

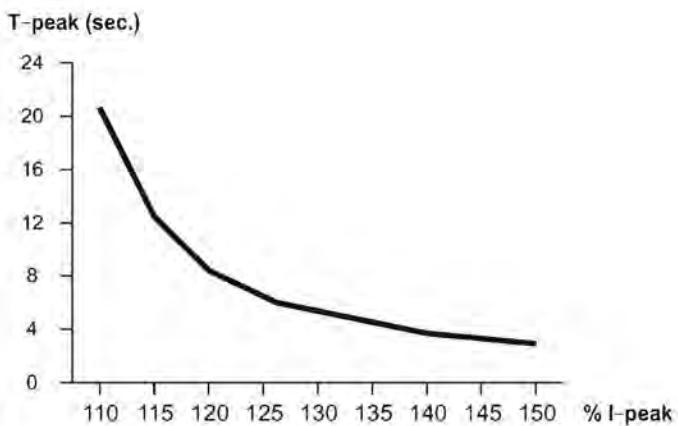

■ Peak Loading:

T_{PEAK} represents the period during which the output current is at 110% to 150% of nominal (shown as I_{PEAK}). Curve B shows the relationship between the percentage of peak current (I_{PEAK}) and the allowable duration (T_{PEAK}). If the peak current is taken for longer than the allowed duration indicated by curve B, the output current will drop to a constant limited current of 105% of nominal, then. The unit between peak currents (T_{NORMAL}) is dependant upon the output current drawn between the peaks (I_{NORMAL}) and curve A shows the relationship between the two. The higher the percentage of normal current (I_{NORMAL}) is of the nominal current, the longer the interval (T_{NORMAL}) before the next peak current can be drawn.
