	1.	All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature.			
	2.	Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor.			
	3.	Tolerance: includes set up tolerance, line regulation and load regulation.			
	4.	Line regulation is measured from low line to high line at rated load.			
	5.	Load regulation is measured from 0% to 100% rated load.			
	6.	The power supply is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed that it still meets EMC directives.			
	7.	Length of set up time is measured at cold first start. Turning ON/OFF the power supply very quickly may lead to increase of the set up time			
	8.	33% Duty cycle maximum within every 30 seconds. Average output power should not exceed the rated power.
